Markets and customers (extract)

SIEMENS

Our services portfolio

Due to the modern technical infrastructure of our network of depots and our highly qualified employees, we offer you optimal solutions in all maintenance matters.

Overview of DB Fahrzeuginstandhaltung

Our range of services – vehicles

Overhaul & general inspection

Thanks to our extensive experience and wide-ranging competencies, you benefit from effective processes from just one source.

Redesign

With the modernisation of your vehicle fleet, you benefit from a fresh look and modern features.

Accident repairs

In our accident processing centres, we offer you comprehensive solutions for refurbishment. So that your vehicle is available again safely and quickly.

Heritage rail vehicles

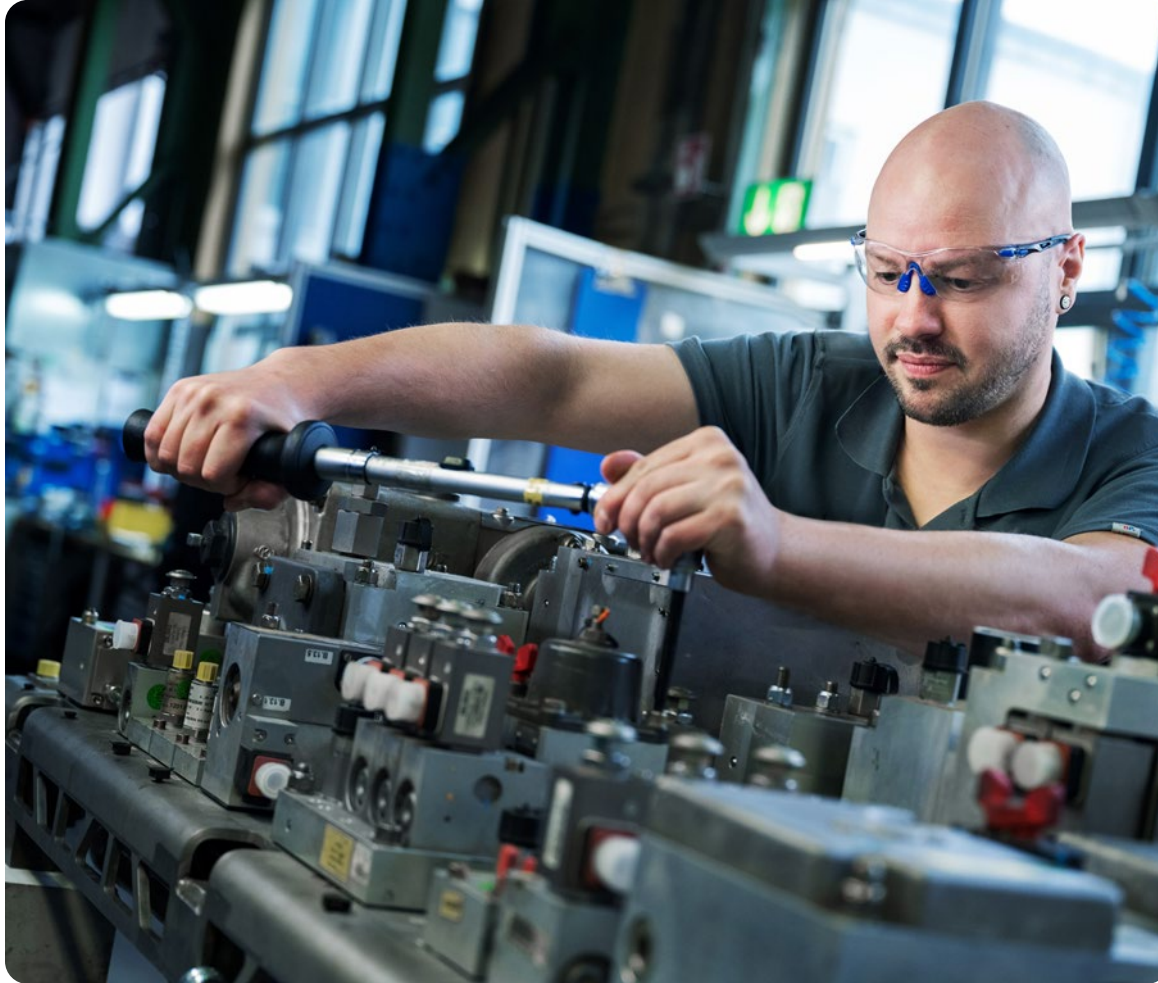

With many years of experience and specialist technical knowledge, we are your competent partner for the refurbishment of your heritage rail vehicles.

Infrastructure rolling stock & rail vehicle cranes

Our experts are happy to support you in the area of infrastructure rolling stock. Thanks to our mobile teams, repairs can also be carried out on site. We are your expert for hydraulic, compressed air and fuel systems. With quality maintenance for an optimal lifetime for components and a maximum operating time of your vehicle fleet.

Overview of DB Fahrzeuginstandhaltung

Our range of services – components

Diesel engines & powerpacks

With our special vertical range of manufacture, we ensure the optimum life cycle of your drive components.

Power & control electronics

We offer you reliable reconditioning of old components as well as the revision of components of the latest rail vehicle generations.

Brake & compressed air supply systems & brake test units

Benefit from our expertise in the field of safety-relevant brake systems, including air-controlling brake parts and discover our brake testing and brake trial equipment.

Overview of DB Fahrzeuginstandhaltung

Our range of services – components

Wheelsets & bogies

We are your specialist for the reconditioning, general overhaul and repair of traction and carrying wheelsets.

HVAC systems

We specialise in the service, repair and maintenance of HVAC systems and their subcomponents – operating manufacturer-independent.

Buffing, draw gear & coupling elements

We are your specialist for maintenance, repair and overhaul of coupling systems.

Rewinding

Rely on us for the overhaul of traction motors as well as for the heavy maintenance of new solid-state coil windings and new magnetic laminated cores.

Overview of DB Fahrzeuginstandhaltung

Our range of services – full service

Our ultimate goal: to increase your vehicle availability!

With over 500 qualified workshops, we offer you a flexible and comprehensive workshop network with numerous infrastructure and service capacities at the highest level throughout Germany and Central Europe.

Through our mobile service teams, we are available at any time with our experience and expertise – also during ongoing operations.

Rely on us as a strong partner who supports you in increasing your **vehicle availability** for your entire fleet.

Digitisation and innovations

We combine classic rail transport with innovative mobility solutions.

Overview of DB Fahrzeuginstandhaltung

Our range of services – digitisation and innovations

Colibri

(Coach Link for Broadband Information Exchange) is a flexible and expandable system of innovative technologies for your fleet to optimise maintenance and passenger satisfaction.

Digital automatic coupling

Together with DB Cargo and other partners, we are working on developing a European standard for digital automatic coupling (DAC), which will consistently automate and optimise operational processes in rail freight transport.

Overview of DB Fahrzeuginstandhaltung

Our range of services – digitisation and innovations

Digital inspection

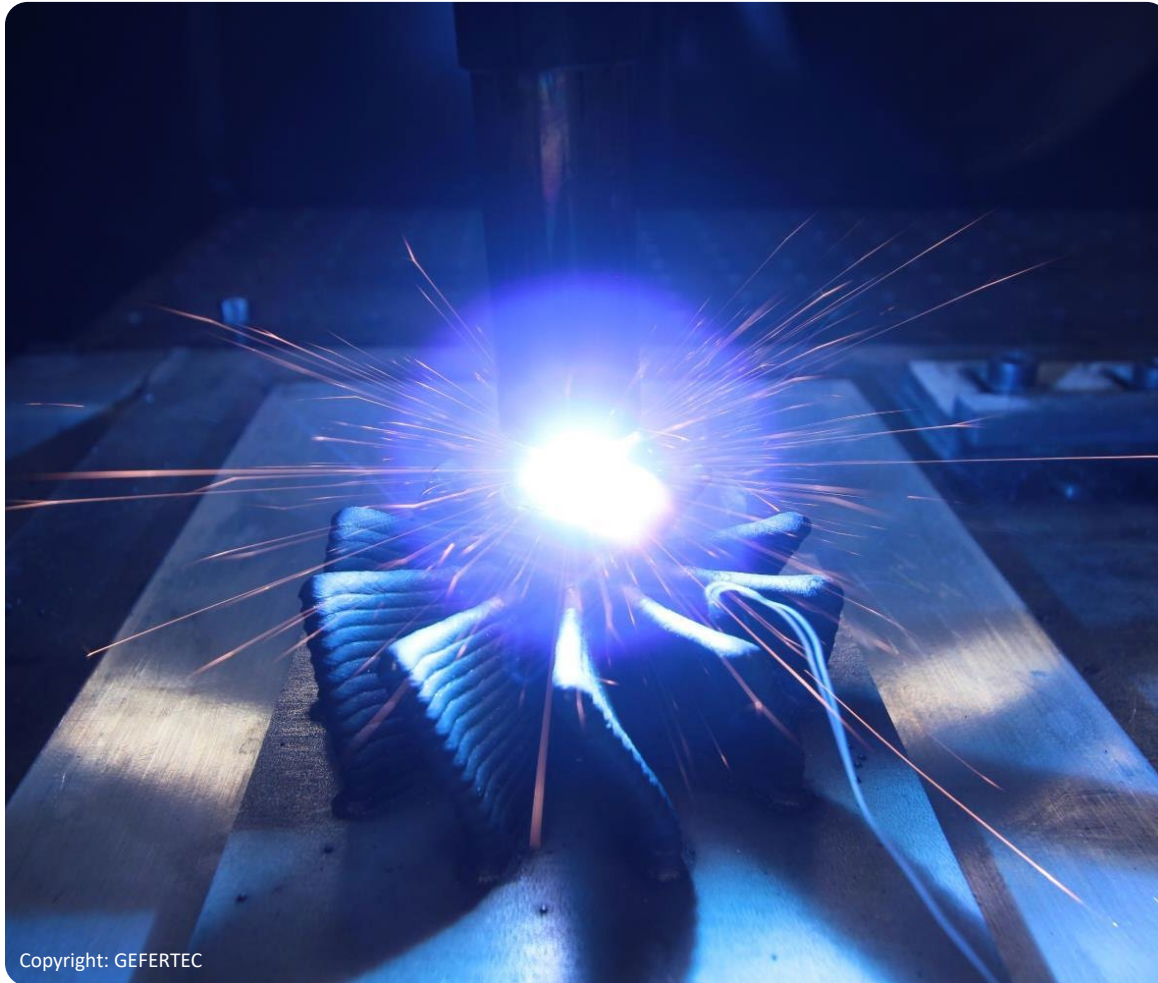

Through the targeted use of digital measuring systems, we raise the findings and analysis of the causes of damage to rail vehicle components to a new level, reduce maintenance depot downtimes and thus increase your vehicle availability.

ETCS

To secure your competitiveness, we support you with the necessary experience, competence and required know-how in your modification projects for the implementation of the European Train Control System (ETCS).
