

Fahrzeuginstandhaltung

The very best service for your diesel engines

Inspections and overhauls of your engines
for reliable vehicle availability.

Reconditioning of engines and drive systems:

- All common motor types and drive systems
- Vendor-agnostic
- In the maintenance depot or on-site (mobile maintenance)

Reconditioning of drive and combustion components:

- Joint shafts, camshafts, crankshafts
- Pistons and connecting rods
- Motor and gearbox casing
- Cylinder heads
- Cable harnesses
- Starters
- Turbochargers
- Air and air conditioning compressors
- Axles
- Hydraulic pumps
- Cooling systems
- Fuel injection pumps
- Injectors
- Couplings
- Locomotive gearboxes
- Plate bundles, tube bundles and network coolers
- Oil burners
- Precision mechanics
- Thermal spraying of metals

Special maintenance depots for injectors/ injection pumps, among other things:

- Ultrasonic cleaning
- Computer-assisted measurement of setting values
- Replacement of components, including setting shims
- Checking of actuator solenoids
- Nozzle replacement
- Inspection, including log

State-of-the-art infrastructure:

- Engine and drive system test stand (6 testing cells with 8 test stands)
- Gearbox test bench
- Various component test stands

We have decentralised service teams available for deployment all over Europe.
